[Energy and the English Industrial Revolution ...](#)
In the Industrial Revolution, energy usage increased massively and output rose accordingly. The energy source continued to be plant photosynthesis, but accumulated over a geological age in the form of coal. This poses a problem for the future. Fossil fuels are a depleting stock, whereas in pre-industrial time the energy source, though limited, was renewed each year.

[Energy and the English Industrial Revolution: E. A ...](#)
Mr. Wrigley has written a very impressive book on the English industrial revolution. Actually this book is a trailblazer for economic history and the importance of energy and energy development in economic growth. Mr. Wrigley begins with the concept of an organic economy. In the organic economy land is the source of all food, natural resources, and energy. Quoting Mr. Wrigley "All industrial

[Energy and the English Industrial Revolution - E. A ...](#)
The industrial revolution transformed the productive power of societies. It did so by vastly increasing the individual productivity, thus delivering whole populations from poverty. In this new account by one of the world's acknowledged authorities the central issue is not simply how the revolution began but still more why it did not quickly end. The answer lay in the use of a new source of energy. Pre-industrial societies had access only to very limited energy supplies. As long as mechanical

Energy and the English Industrial Revolution ...

Societies before the Industrial Revolution were dependent on the annual cycle of plant photosynthesis for both heat and mechanical energy. The quantity of energy available each year was therefore limited, and economic growth was necessarily constrained. In the Industrial Revolution, energy usage increased massively and output rose accordingly.
